

Providing world class, client focused digital investigations

# DELEVAN GROUP

## Digital Investigation Services Overview

The Delevan Group provides professional services with a tenacious focus on our client's most critical issues. Solving extraordinary technical challenges is what drives our team of professionals.

### Services Overview

#### Global Data Growth and Dissipation

Enterprise data is growing rapidly, and in today's world it is important to work with a technical advisor that can assist with finding the truly important trees within the forest. The Delevan Group has experience collaborating with clients to unearth relevant information within disparate electronic sources. Data continues to dissipate away from traditional enterprise storage solutions toward the cloud, externally hosted email solutions, third party servers, and employee laptops and mobile devices. Our consultants track down this data, which is essential for immediate, time sensitive, critical litigations and investigations.

#### Advanced Analytics and AI

Through the application of advanced analytical techniques inclusive of artificial intelligence and computer assisted review, the Delevan Group shines light on hidden and ephemeral data and can also detect patterns and anomalies within that data to ensure our clients benefit from the value of our experience.

#### Expert Professional Services

The Delevan Group provides expert services in the areas of digital investigations, computer forensics, complex data analysis, electronic discovery, cyber breach response, and information governance. Our professionals have decades of experience, take a multidisciplinary approach, and deliver defensible, practical and comprehensive solutions. We provide transparency in every step of a matter or investigation from initial assessments and preservation efforts, intelligence and fact gathering to reports and resolutions.

### Client Driven Support

#### Digital Forensics

We are involved from the onset to provide guidance and advice to our clients to help identify the people, the data sources, and timeframe of the electronic data being preserved and analyzed.

#### eDiscovery Services

Our professionals deliver scalable, defensible and repeatable processes designed to reduce costs and drive precise results throughout the eDiscovery lifecycle.

#### Data Analytics

Our data analytics and modeling methodology improves results and reduces costs by applying best practices to identify and classify relevant data quickly significantly reducing the time and cost of data mining and reporting.
